# 1 Introduction

The 'ArcGIS for INSPIRE Server Extension' is an essential core component of ArcGIS for INSPIRE. The extension contains the server-side functionality to add INSPIRE download and view services to ArcGIS Server in accordance with the INSPIRE directive.

This purpose of this document is to provide instructions on installation of the 'ArcGIS for INSPIRE Server Extension'; describe the changes made to the system once it is installed, performance considerations and possible modifications, and further configurations; and provide details for localization.

# 2 System Requirements

'ArcGIS for INSPIRE 10.7.1 Server Extension' requires the same version of ArcGIS Server. See the System Requirements section of ArcGIS for INSPIRE web help at:

- English
- <u>French</u>
- <u>German</u>
- <u>Spanish</u>

If you are installing ArcGIS for INSPIRE for the first time, see section **3 Installation**.

If you are upgrading from a previous version of ArcGIS for INSPIRE, see section 4 Upgrade Installation.

# 3 Installation

The instructions for new installation for an ArcGIS site with a <u>single GIS server</u> are different than for a site with <u>multiple GIS server</u> machines. Please read the following instructions before installation.

<u>Single GIS Server site</u> – To install 'ArcGIS for INSPIRE Server Extension' on a single GIS server:

- 1. Verify that you have already installed ArcGIS Server on the machine where you'll be installing the 'ArcGIS for INSPIRE Server Extension'. ArcGIS Server 10.7.1 service should already be running.
- 2. Verify that you have administrative system rights to run the setup.
- 3. Navigate to the *ServerExt* folder and run setup.exe.
- 4. Follow instructions on the installation wizard interface.

The installation is now completed. Proceed to section **5 Configuration** to configure ArcGIS for INSPIRE.

<u>Multiple GIS Server site</u> – To install the 'ArcGIS for INSPIRE Server Extension' on a multiple GIS server site:

1. Setup an ArcGIS Server 10.7.1 Site with multiple GIS server machines.

April 2019

2. Install ArcGIS for INSPIRE 10.7.1 server extension on each machine in the ArcGIS Server site, as described above.

The installation is now completed. Proceed to section **5 Configuration** to configure ArcGIS for INSPIRE.

# 4 Upgrade Installation

The instructions to upgrade for an ArcGIS site with a <u>single GIS server</u> are different than for a site with <u>multiple GIS server</u> machines. Please read the following instructions before upgrading.

NOTE: Upgrading from older versions (prior to 10.3.1) requires either starting fresh with version 10.7.1, or upgrading first to each subsequent version, e.g., 10.2.1 to 10.2.2 to 10.3.1. Please read the migration guide (MigrationGuide\_ArcGISForINSPIRE\_10\_7\_1\_EN.pdf) for further details. Once you have reached version 10.3.1, you may now proceed to upgrade to 10.7.1.

Single GIS Server site – To upgrade the 'ArcGIS for INSPIRE Server Extension' on a single GIS server:

- 1. Verify that you have already upgraded to ArcGIS Server 10.7.1 on the machine where you'll be installing the 'ArcGIS for INSPIRE Server Extension'. ArcGIS Server 10.7.1 service should already be running.
  - a. IMPORTANT: If you're upgrading directly from ArcGIS for INSPIRE 10.3.1, please see **13** Appendix: ArcGIS for INSPIRE 10.3.1 to 10.7.1 Special Upgrade Instructions
- 2. Verify that you have administrative system rights to run the setup.
- 3. Navigate to the *ServerExt* folder and run setup.exe.
- 4. Follow instructions on the installation wizard interface. When upgrading from 10.6.1, you may get a warning about "...\handler.properties not found". You can ignore this warning and continue installation by clicking "OK".

The installation is now completed. Proceed to section **5 Configuration** to configure ArcGIS for INSPIRE.

<u>Multiple GIS Server site</u> – To upgrade the 'ArcGIS for INSPIRE Server Extension' on a multiple GIS server site:

- 1. NOTE: If you're Verify that you have already upgraded to ArcGIS Server 10.7.1 on the machine where you'll be installing the 'ArcGIS for INSPIRE Server Extension'. ArcGIS Server 10.7.1 service should already be running.
  - a. IMPORTANT: If you're upgrading from ArcGIS for INSPIRE 10.3.1, please see **13** Appendix: ArcGIS for INSPIRE 10.3.1 to 10.7.1 Special Upgrade Instructions
- 2. Verify that you have administrative system rights to run the setup on each GIS server machine.
- 3. Navigate to the *ServerExt* folder and run setup.exe on each GIS server machine.
- 4. Follow instructions on the installation wizard interface on each GIS Server machine. When upgrading from 10.6.1, you may get a warning about "...\handler.properties not found". You can ignore this warning and continue installation by clicking "OK".

The installation is now completed. Proceed to section **5 Configuration** to configure ArcGIS for INSPIRE.

# 5 Configuration

After you've successfully installed the 'ArcGIS for INSPIRE Server Extension' on a single or multi-machine environment, you will need to run the 'ArcGIS for INSPIRE Configuration Utility' to configure and upload the 'ArcGIS for INSPIRE Server Object Extension', and deploy configuration files.

Follow the instructions below to run the 'ArcGIS for INSPIRE Configuration Utility':

- 1. The 'ArcGIS for INSPIRE Configuration Utility' configures the ArcGIS site and should be executed only on the primary site GIS server.
- 2. Verify that you have administrative system rights to run the 'ArcGIS for INSPIRE Configuration Utility'.
- 3. Setup a directory for the ArcGIS for INSPIRE configuration files to be deployed to. The ArcGIS Server service user needs at least Modify access to this directory. (If configuring for a multiple GIS server site, setup a shared directory for all ArcGIS Server site machines to access. And make sure the users for all ArcGIS Server services have Modify access to this directory.)
- 4. Login to the primary site GIS Server and start the 'ArcGIS for INSPIRE Configuration Utility' by clicking the shortcut in the Start menu under ArcGIS for INSPIRE > Configuration. Answer "Yes" to the User Account Control window.
- 5. Enter the ArcGIS Server Site Administrator Username and Password and click "Connect".
- 6. The Utility will connect to ArcGIS Server and display the Configure parameters section.
- 7. Enter the following configuration parameters:
  - Configuration Directory enter the directory that was setup in Step 3, into the Configuration Directory parameter text box (use UNC path if the ArcGIS site has multiple GIS machines).
  - b. Output Directory the recommended path for the Output Directory will be generated based on the default ArcGIS Output directory location. If you are doing an upgrade, the existing path for the ArcGIS for INSPIRE Output Directory will be used.
- 8. Click "Configure".
- 9. The Configuration Utility will display a Summary window with the configuration information. Click Apply to begin the configuration.
- 10. The Configuration Utility will perform the ArcGIS for INSPIRE configuration.

#### ArcGIS for INSPIRE is now configured.

**Note:** During configuration of the 'ArcGIS for INSPIRE - Server Extension' a new ArcGIS Server output directory is created called "arcgisforinspire". Due to the behaviour of the ArcGIS Server publishing process, this new output directory, in most cases, becomes the default directory entry for the Output Directory in the Service Editor Parameters window when publishing new ArcGIS services. This entry can be changed by using the drop-down control, enabling the selection of other registered output directories.

# 6 Software Authorization

After installing and configuring the software, you must authorize it for use if you have not done so already. Log in to the Esri Customer Care portal (customers.esri.com) using your Esri Global Account to obtain the authorisation numbers.

To enable the 'ArcGIS for INSPIRE Server Extension', launch the Software Authorization tool from Programs > ArcGIS > Software Authorization and restart the ArcGIS Server Windows service.

# 7 Changes to the System

The 'ArcGIS for INSPIRE Server Extension' installation and configuration will result in the following changes to your system:

- It deploys the ArcGIS for INSPIRE files and folders to the install directory. (e.g., C:\Program Files\ESRI\ArcGIS for INSPIRE
- It registers the XtraSrvCOM.dll with the system.
- It creates an ArcGIS Server registered directory to store web-accessible content (e.g., C:\arcgisserver\directories\arcgisforinspire).
- It copies the ArcGIS for INSPIRE Configuration files to a user defined location.
- It updates and registers the ArcGIS for INSPIRE SOE with ArcGIS Server

# 8 Performance Considerations

This section describes aspects that may impact system performance and suggests possible ways to adjust them. System performance can be affected by many factors such as hardware infrastructure, data management solutions, and map document design. For detailed information on best practices and performance considerations, refer to the <u>Architecting the ArcGIS Platform: Best Practices [PDF]</u>.

# 8.1 Spatial Index

Make sure that each feature class in the INSPIRE geodatabase contains a spatial index and that the spatial index has been refreshed after the data is loaded. Adding a spatial index to the geodatabase will impact system performance. In addition, all the fields capable of being indexed in the INSPIRE geodatabase will affect system performance.

# 8.2 Number of Instances

When determining the maximum number of instances for a service, consider the following:

- The number of site machines available
- The number of map services to be deployed
- The maximum number of processes required

The start-up process of an INSPIRE network service may take a little bit longer than you are used to. This is because both the INSPIRE view service and the INSPIRE feature download service need to initialise and verify the INSPIRE data model at the geodatabase level. Once the service is started, it should perform similarly to other ArcGIS Server services.

For operating the services, it is recommended that you set the minimum number of instances to the same value as the maximum number of instances. If the minimum number is lower than the maximum number, this can lead to a server object container (SOC) process start-up when the service is loaded during operation. Because start-up will take time, if a new SOC instance must start on the fly, it will slow down the response to a request.

# 9 Services Configuration

This section provides information on how to configure the INSPIRE services.

## 9.1 INSPIRE View Service: GetFeatureInfo

Executing a GetFeatureInfo request on a view service instance results in an INSPIRE feature download service request (operation GetFeature) to the internal feature server engine.

Since the GetFeatureInfo operation supports HTML as the return type of the operation, the created Geography Markup Language (GML) of the INSPIRE feature download service has to be transformed from XML to human-readable HTML.

ArcGIS for INSPIRE has several Extensible Style Language (XSL) style sheets that transform XML to HTML. These style sheets can be found in the ArcGIS for INSPIRE configuration folder chosen when running the Configuration Utility. See the folder templates for the XSL files.

There are two important files under the template directory:

- The wfs-getfeature-response-transform.xsl file is the root template that includes all other templates.
- The featureTypesTableHeader.xsl file contains HTML table headings for each feature type supported. All other \*.xsl files (referenced by \_featureTypeIncludes.xsl and located in the includes subfolder) deal with a specific INSPIRE layer.
- These files are dedicated to encapsulating the specific GML application schema knowledge inside the file.

## 9.1.1 Example: AdministrativeBoundary

Figure 1 shows an example of transforming XML to HTML in the GetFeatureInfo operation. The includes/au\_AdministrativeBoundary.xsl file is responsible for selecting values from the returned GML string of a GetFeatureInfo request on the INSPIRE AU:AdministrativeBoundary layer. This layer is transformed to a GetFeature request on spatial object type AU:AdministrativeBoundary.

```
<?xml version="1.0" encoding="UTF-8"?>
       <!--
               This Style Sheet is used to transform Inspire GML Data into html for
               the GetFeatureInfo requests of a ViewService. You can reference other
               style sheets relative!
       -->
<xsl:stylesheet version="2.0" xmlns="http://www.w3.org/1999/xhtml"
       xmlns:xsl="http://www.w3.org/1999/XSL/Transform" xmlns:xs="http://www.w3.org/2001/XMLSchema"
       xmlns:gml="http://www.opengis.net/gml/3.2" xmlns:xlink="http://www.w3.org/1999/xlink"
       xmlns:p="http://conterra.de/xslt/params" xmlns:util="xalan://de.conterra.suite.ifc.soe.common.xml.XSLTFunctions"
       xmlns:au="urn:x-inspire:specification:gmlas:AdministrativeUnits:3.0"
       xmlns:qmd="http://www.isotc211.org/2005/qmd"
       exclude-result-prefixes="xlink xsl xs gml p util au gmd">
       <1--
               template writes the gml au:AdministrativeBoundary feature types, please see the
               "featureTypes-TableHeads.xsl for the required columns
       <xsl:template match="au:AdministrativeBoundary">
                \langle tr \rangle
                       \langle td \rangle
                               <xsl:value-of select="@gml:id" />
                       \langle td \rangle
                       <xsl:apply-templates mode="administrativeboundary" />
               </mmsl:template>
       <xsl:template match="au:country" mode="administrativeboundary">
                       \langle td \rangle
                               <xsl:value-of select="//gmd:Country/text()" />
                       </mmsl:template>
       <xsl:template match="text() | @ *" mode="administrativeboundary">
                </xsl:template>
</xsl:stvlesheet>
```

#### Figure 1: File au\_AdministrativeBoundary.xsl for Transforming GML Response of AU:AdministrativeBoundary

#### 9.1.2 GML Transformation Extension

If the HTML file resulting from a GML transformation needs to be adjusted for a specific INSPIRE layer, two files should be modified:

- The file named according to the INSPIRE layer. For example, if you have an INSPIRE layer with the name au:AdministrativeBoundary, use the au\_AdministrativeBoundary.xsl file.
- The featureTypesTableHeader.xsl file.

Additional XSL SELECT statements can be added to meet the needs of your organisation. For example, if you want to display the gml:geometry string in your HTML response, you would select this using the proper XSL statement.

The HTML output creates a flat table of attributes and their associated values. If you are going to extend the number of output properties, you also need to add the corresponding table headers. This can be done by modifying the featureTypesTableHeader.xsl file.

The number of selected attributes in the INSPIRE layer-specific XSL file and the number of HTML table header fields should be the same. Any changes made to the XSL files will take effect after restarting the view service instance.

## 9.2 Inspire\_common:DEFAULT Style

The ArcGIS Server configuration folder for ArcGIS for INSPIRE also contains a folder named slds (for example: C:\ arcgisforinspireconfig\slds). This folder contains Style Layer Descriptor rules for all layers referenced in the INSPIRE data specifications of INSPIRE Annex I data themes. See figure 2 below as an example.

```
<?xml version="1.0" encoding="UTF-8" standalone="yes" ?>
- <sld:StyledLayerDescriptor xmlns:ogc="http://www.opengis.net/ogc" xmlns:sld="http://www.opengis.net/sld" version="1.0.0"
   xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
   xsi:schemaLocation="http://www.opengis.net/sld ../schema/ogc/sld/1.0.0/StyledLayerDescriptor.xsd">
  - <sld:NamedLaver>
     <sld:Name>AU.AdministrativeUnit</sld:Name>
   - <sld:UserStyle>
       <sld:Name>inspire_common:DEFAULT</sld:Name>
       <sld:IsDefault>1</sld:IsDefault>

    <sld:FeatureTypeStyle>

         <!-- <sld:Description>
         <sld:Title>Administrative Unit Default Style</sld:Title>
         <sld:Abstract>The administrative unit is rendered using a vellow (#FFFF66) fill.</sld:Abstract>
        </sld:Description>
       - <sld:Rule>
         - <sld:PolygonSymbolizer>
           <sld:Fill>
              <sld:CssParameter name="fill">#FFFF66</sld:CssParameter>
            </sld:Fill>
           </sld:PolygonSymbolizer>
         </sld:Rule>
       </sld:FeatureTypeStyle>
     </sld:UserStyle>
   </sld:NamedLayer>
  </sld:StyledLayerDescriptor>
```

#### Figure 2: SLD Example for AU:AdministrativeBoundary

By default, the styles available in this folder will be used to visualize the INSPIRE layers.

In addition, ArcGIS for INSPIRE makes the defined ArcMap style available for use within INSPIRE view services (figure 3).

#### Figure 3: Styles Available in the View Service Capabilities

The SLD files are configured to run on the geodatabase. If you want to modify these styles, understand that you are responsible for aligning with SLD specifications and the underlying database structure.

**Note:** In order to have custom designed legend graphics for each layer, language, and style, you have to save the graphic image to <ArcGIS Server Directories>\arcgisforinspire\<MapServiceName>\_MapServer with naming schema <layer>\_<language>\_<style>.png . (e.g. for layer 'sr.shoreline' with style

'inspire\_common\_default' and language 'eng' the file would be named sr.shoreline\_eng\_inspire\_common\_default.png. The file would be saved in folder C:\arcgisserver\directories\arcgisforinspire\sr\_MapServer)

# 9.3 Adding Custom Coordinate Reference Systems

ArcGIS for INSPIRE allows you to add additional coordinate reference systems (CRS) to be supported. The approach is a bit different than the one for Web Map Service (WMS) server instances, as it requires that you copy and edit a configuration file called inspire-constants.properties:

- 1. Copy the SOE file from C:\arcgisserver\config-store\extns\arcgis-for-inspire.soe to a temporary location.
- 2. Rename it arcgis-for-inspire.zip.
- 3. Unpack the ZIP file and locate a4i-ags-common.jar under the Install directory.
- 4. Rename it a4i-ags-common.zip and unzip it again.
- 5. Locate inspire-constants.properties under the unzipped directory.
- 6. Copy the file to the arcgisforinspire directory under config-store location. This is a template file available for your customizations (*e.g., C:\arcgisserver\config-store\arcgisforinspire\inspire-constants.properties).*

Once the file is available in the above location, the copied file will be used instead of the one contained in the SOE extension file.

- 7. Open the file with an editor and locate the property supported.crs.codes.
- 8. Add a comma-separated list of EPSG codes you want to add. Notice that you also can add EPSG code ranges (e.g., EPSG:25830-25838).
- 9. Changes will take effect upon restart of each ArcGIS map service instance:
  - a. Each CRS will be listed in the view service's GetCapabilities response.
  - b. Corresponding to each CRS, a BoundingBox element will be added to each layer element.

**Note:** As the feature server back-end does not support all EPSG codes, it will reject systems not currently supported.

When setting up an INSPIRE view service, a GetFeatureInfo request won't be forwarded to the feature server. Instead, it will be forwarded to the underlying ArcGIS WMS server.

When setting up an INSPIRE feature download service, the configured system won't be supported by the A4I feature download service.

In both cases, you will find a log message in the ArcGIS Server log files: "CRS <unsupportedCRS> is currently not supported and will not be available when accessing the feature service."

# 9.4 Turn off streaming for INSPIRE Services

Starting with ArcGIS 10.2.2 SP1 for INSPIRE, streaming is enabled by default for INSPIRE download services, and ArcGIS for INSPIRE allows you to turn off streaming for both type of services if necessary, following are the steps to turn off streaming:

- 1. Stop the service that need to have streaming turned off.
- 2. Go to the service configuration folder (e.g., C:\arcgisserver\config-store\services \abup2.MapServer).
- 3. Open JSON configuration file (e.g., abup2.MapServer.json).
- 4. Search "streamingEnabled": "true", and change the value to "false".
- 5. Save the file, then restart the service.

## 9.5 Turn off caching of INSPIRE Services getCapabilities documents

By default ArcGIS for INSPIRE creates service-level capabilities documents when the service starts. To turn off caching for both types of INSPIRE services:

- 1. Stop the service that need to have caching of capabilities documents turned off.
- 2. Go to the service configuration folder (e.g., C:\arcgisserver\config-store\services \abup2.MapServer).
- 3. Open JSON configuration file (e.g., abup2.MapServer.json).
- 4. Search " cacheGetCapabilities": "true", and change the value to "false".
- 5. Save the file, then restart the service.

## 9.6 Create and use custom INSPIRE Services getCapabilities documents

ArcGIS for INSPIRE allows you to apply changes (for example keywords) to the getCapabilities documents returned by WMS and WMTS-based INSPIRE View services as well as WFS-based INSPIRE Download services.

If "cacheGetCapabilities" is set to false then getCapabilities reponse is generated dynamically and cannot be override by a custom getCapabilities file. This means that all properties authored in ArcCatalog property pages are reflected in the response.

If "cacheGetCapabilities" is set to true then getCapabilities response is generated every time service is restarted and file is cached for each version and supported languages.

#### **View service instructions**

If the administrator decides to create and use a custom getCapabilities response, then GetCapabilities<version>\_<3 letter language code>\_custom.xml filename needs to be used at the service cached capabilities folder (for example

If a custom getCapabilities file is found in the folder, the file is used to respond to getCapabilities request for that specific version and language level. For example, GetCapabilities130\_FRE\_custom.xml would be used when responding to a getCapabilities request with parameter Language=FRE and version=1.3.0 and

service=WMS request parameters. If there is no custom cached file in the directory for that particular language and version configuration the regular cached getCapabilities files are used to respond. The administrator therefore may choose to use custom cache file for certain version and/or language and use default for others. Custom cached getCapabilities file is not deleted when service is restarted. Only default cached getCapabilities files are deleted and recreated.

For WMTS-based getCapabilities the custom file name pattern is WMTSGetCapabilities100\_<3 letter language code>\_custom.xml.

#### **Download service instructions**

If the administrator decides to use a custom getcapabilities response, then GetCapabilities<version>\_<3 letter language code>\_custom.xml filename needs to be used at the service cached capabilities folder (for example

c:\arcgisserver\directories\arcgisforinspire\GEMR\_MapServer\GEMR\_MapServer\_inspiredownload).

If a custom getCapabilities file is found in the folder, the file is used to respond to getCapabilities request for that specific version and language level. For example, GetCapabilities200\_FRE\_custom.xml would be used when responding to a getCapabilities request with parameter Language=FRE and version=2.0.0 and service=WFS request parameters. If there is no custom cached file in the directory for that particular language and version configuration, the regular cached getCapabilities files are used to respond. The administrator therefore may choose to use custom cache file for certain version and/or language and use default for others. Custom cached getcapabilities file is not deleted when service is restarted. Only default cached getcapabilities files are deleted and recreated.

# 10 Other Configurations

## 10.1 Configure ArcGIS for INSPIRE when ArcGIS services directory browsing is disabled

If the ArcGIS Services directory browsing has been disabled, some manual configuration is needed to allow the ArcGIS for INSPIRE rest requests to function correctly. Follow the steps below to make these configurations.

- 1) Make a backup copy of web.xml that should be located at <ArcGIS Server install>\Server\framework\runtime\tomcat\webapps\arcgis#rest\WEB-INF
- 2) Locate the Patches folder installed under the ArcGIS for INSPIRE Server extension install folder (i.e. <a href="https://www.arcGIS">ArcGIS for INSPIRE ServerExt Install>\Patches</a>). Replace the web.xml file with the web.xml file included in the ArcGIS for INSPIRE ServerExt installation Patches folder. If the file was previously customized it is recommended to modify the existing web.xml by adding the specific InspireFilter filter section as defined in the included web.xml. If the ArcGIS site includes multiple machines, this process must be repeated in each GIS machine.
- Copy the a4i-ags-filter.jar, also included in the ArcGIS for INSPIRE ServerExt installation Patches folder, to the<ArcGIS Server install>\Server\framework\runtime\tomcat\webapps\arcgis#rest\WEB-INF\lib.
- 4) Restart the ArcGIS Server service.

## 10.2 Increase Java Heap Size for an INSPIRE service to avoid performance issues

If an INSPIRE service experience performance or running out of memory issues for long running INSPIRE services, it is recommended to increase Java heap size for these services to avoid performance issues.

- 1) Make sure the service is started in ArcGIS Manager,
- 2) Login to the ArcGIS Server 'admin' application through <a href="https://chost>:cport>/arcgis/admin">https://chost>:cport>/arcgis/admin</a>,
- 3) Select 'services' link,
- 4) Select the service to increase heap memory,
- 5) Scroll to the bottom of the page and select 'edit',
- 6) Update or add the following entry as shown:
  - {

```
<some properties>,

"properties": {

<some properties>,

"javaHeapSize": "256"

}
```

7) Press 'Save Edits',

8) Restart the service in ArcGIS Manager.

# 11 Localization

The 'ArcGIS for INSPIRE Desktop Extension' is localized in French, Spanish, and German languages. If you have an ArcGIS language supplement of these languages installed, ArcGIS for INSPIRE will make use of localized messages.

The 'ArcGIS for INSPIRE Server Extension' is localisable to other European Member State languages in terms of how the ArcGIS for INSPIRE network services respond to user requests. Follow instructions in the "ArcGIS for INSPIRE Localisation" section of the ArcGIS for INSPIRE web help.

# 12 ArcGIS for INSPIRE Log Codes

The ArcGIS for INSPIRE log codes

| Code<br>Number                                   | Торіс                                    | Description  |
|--|--|--|
| 95001 -<br>95099                                 | Server config                            | SSL and GIS Machines   |
| 95001  | SERVER_CONFIG                            | General server configuration.  |
| 95002  | SERVER_CONFIG_SERVICE_INFO               | General server service information.  |
|  |  |  |
| 95100 -<br>95199                                 | SOE config parameters                    | The Config Folder and SSL  |
| <b>95100</b> -<br><b>95199</b><br>95100          | SOE config parameters SOE_CONFIG         | The Config Folder and SSL<br>INSPIRE specific service configuration.                                       |
| <b>95100</b> -<br><b>95199</b><br>95100<br>95101 | SOE config parameters SOE_CONFIG SOE_SSL | The Config Folder and SSL         INSPIRE specific service configuration.         General SSL information. |

| 95103 | SOE_SSL_CIPHER_SUITE                          | SSL cipher suite information.  |
|-------|---|--|
| 95104 | SOE_SSL_CERT_TYPE                             | SSL certification type.  |
| 95105 | SOE_SSL_CERT_HASH_CODE                        | SSL certificate hash code.   |
| 95106 | SOE_SSL_PUBLIC_KEY_ALGO                       | SSL public key algorithm.  |
| 95107 | SOE_SSL_PUBLIC_KEY_FORMAT                     | SSL public key format.   |
| 95108 | SOE_CONFIG_PATH                               | INSPIRE services configuration store path.   |
| 95109 | SOE_CONFIG_PATH_ERR                           | Could not read configuration store location.   |
| 95110 | SOE_CONFIG_STREAMING                          | Streaming response configuration for INSPIRE services.   |
| 95111 | SOE_SERVICE_REST_URL                          | INSPIRE service REST url.  |
| 95112 | SOE_SSL_REST_CLIENT_CERTIFICA<br>TE_TRUST_ALL | Allow self-signed certificate on HTTPS url resources requested by REST client.                         |
| 95113 | SOE_SSL_REST_CLIENT_CERTIFICA<br>TE_TRUST_ERR | Error occurred while trusting self-signed certificate on HTTPS url resources requested by REST client. |
| 95114 | SOE_SSL_REST_CLIENT_PROCESS_<br>REQUEST_ERR   | Error occurred while processing HTTPS request in REST client.  |
| 95115 | SOE_SSL_REST_CLIENT_JSON_RES<br>PONSE_ERR     | Error occurred while processing JSON HTTPS response in REST client.                                    |
| 95116 | SOE_REST_CLIENT_READ_CHARS                    | Error occurred while reading characters in REST client.  |
| 95117 | SOE_REST_CLIENT_JSON_RESPON<br>SE_ERR         | Error occurred while processing JSON HTTP response in REST client.                                     |
| 95118 | SOE_REST_CLIENT_SEND_REQUES<br>T_ERR          | Error occurred while sending request from REST client.   |
| 95119 | SOE_REST_CLIENT_CERTIFICATE_T<br>RUST_ALL     | Allow self-signed certificate on url resources requested by REST client.                               |
| 95120 | SOE_REST_CLIENT_CERTIFICATE_T<br>RUST_ERR     | Error occurred while trusting self-signed certificate.   |
| 95121 | SOE_REST_CLIENT_PROCESS_REQ<br>UEST_ERR       | Error occurred while processing request in REST client.  |

| 95200 -<br>95399 | INSPIRE service instance config                    | Gdb templates included and backend server component init config parameters |
|------------------|--|--|
| 95200            | INSPIRE_SERVICE_CONFIG                             | General inspire service configuration.                                     |
| 95201            | INSPIRE_INVALID_WORKSPACE                          | INSPIRE Service without a corresponding INSPIRE GDB as data store.         |
| 95202            | INSPIRE_FAILOVER_WORKSPACE                         | Using first available workspace as failover workspace.                     |
| 95203            | INSPIRE_FAILOVER_NO_WORKSPA<br>CE                  | No available workspace to use as failover workspace.                       |
| 95204            | INSPIRE_SERVICE_JSON_FETCH                         | Reading INSPIRE service JSON.  |
| 95205            | INSPIRE_SERVICE_LOOKUP_URL                         | INSPIRE service REST Admin url.  |
| 95206            | INSPIRE_SERVICE_LOOKUP_URL_P<br>ARAMS              | INSPIRE service REST Admin url parameters.                                 |
| 95207            | INSPIRE_SERVICE_EDIT_URL                           | INSPIRE service REST Admin edit resource url.                              |
| 95208            | INSPIRE_SERVICE_EDIT_URL_PARA<br>MS                | INSPIRE service REST Admin edit resource url parameters.                   |
| 95209            | INSPIRE_SERVICE_JSON_EXTN_PR<br>OPS_UPDATE_SUCCESS | INSPIRE service extension JSON properties update successful.               |
| 95210            | INSPIRE_SERVICE_JSON_EXTN_PR<br>OPS_UPDATE_ERR     | Error occurred while updating INSPIRE service extension JSON properties.   |
| 95211            | INSPIRE_SERVICE_JSON_UPDATE_<br>ERR                | Exception in INSPIRE service extension JSON properties update.             |
| 95212            | INSPIRE_SERVICE_JSON_UPDATE                        | INSPIRE service extension JSON properties updated.                         |
| 95300            | SOE_XTRASERVER_COMMUNICATI<br>ON                   | General INSPIRE SOE to backend server component communication.             |
| 95301            | SOE_XTRASERVER_COMMUNICATI<br>ON_REQUEST           | Forwarding WFS request to backend server component.                        |
| 95302            | SOE_XTRASERVER_COMMUNICATI<br>ON_LOG_DUMP_ERR      | Error occurred while trying to dump XtraServer logs.                       |
| 95303            | SOE_XTRASERVER_COMMUNICATI                         | Failed to shutdown backend server component.                               |

|       | ON_SHUTDOWN_FAILED  |  |
|-------|---|--|
| 95304 | SOE_XTRASERVER_COMMUNICATI<br>ON_INVALID_INSPIRE_WORKSPAC<br>E          | Can't create WFS Server backend without a valid INSPIRE workspace.                       |
| 95305 | SOE_XTRASERVER_COMMUNICATI<br>ON_NO_FEATURETYPES_CONFIGU<br>RED         | Aborting WFS Server backend creation, no feature types configured.                       |
| 95306 | SOE_XTRASERVER_COMMUNICATI<br>ON_INIT                                   | Create new backend server component instance for INSPIRE service.                        |
| 95307 | SOE_XTRASERVER_COMMUNICATI<br>ON_DB_SCHEMA                              | Database schema name passed to backend server component from INSPIRE SOE.                |
| 95308 | SOE_XTRASERVER_COMMUNICATI<br>ON_PARAMETER_TEMPLATE_INF<br>O            | Gdb Template information passed to backend server component from INSPIRE SOE.            |
| 95309 | SOE_XTRASERVER_COMMUNICATI<br>ON_PARAMETER_TEMPLATE_INF<br>O_TEMPLATES  | Gdb Templates theme names parameter passed to backend server component from INSPIRE SOE. |
| 95310 | SOE_XTRASERVER_COMMUNICATI<br>ON_PARAMETER_TEMPLATE_INF<br>O_VERSION    | Gdb Template version parameter passed to backend server component from INSPIRE SOE.      |
| 95311 | SOE_XTRASERVER_COMMUNICATI<br>ON_PARAMETER_TEMPLATE_INF<br>O_GN_PROFILE | Geographic Names profile parameter passed to backend server component from INSPIRE SOE.  |
| 95312 | SOE_XTRASERVER_COMMUNICATI<br>ON_PARAMETER_COMMON_PRO<br>PERTIES        | Common properties parameters passed to backend server component from INSPIRE SOE.        |
| 95313 | SOE_XTRASERVER_COMMUNICATI<br>ON_PARAMETER_COMMON_PRO<br>PERTY          | Common property parameters passed to backend server component from INSPIRE SOE.          |
| 95314 | SOE_XTRASERVER_COMMUNICATI<br>ON_PARAMETER_CRS                          | CRS parameter passed to backend server component from INSPIRE SOE.                       |
| 95315 | SOE_XTRASERVER_COMMUNICATI<br>ON_PARAMETER_CRS_NOT_SUPP<br>ORTED        | CRS parameter not passed to backend server component from INSPIRE SOE.                   |

| 95316 | SOE_XTRASERVER_COMMUNICATI<br>ON_PARAMETER_FEATURETYPES                 | FeatureTypes parameter passed to backend server component from INSPIRE SOE.                                   |
|-------|---|---|
| 95317 | SOE_XTRASERVER_COMMUNICATI<br>ON_PARAMETER_FEATURETYPE                  | FeatureType parameter passed to backend server component from INSPIRE SOE.                                    |
| 95318 | SOE_XTRASERVER_COMMUNICATI<br>ON_PARAMETER_FEATURETYPE_<br>METADATA_URL | FeatureType metadata url parameter passed to backend server component from INSPIRE SOE.                       |
| 95319 | SOE_XTRASERVER_COMMUNICATI<br>ON_PARAMETER_LANGUAGES                    | Languages parameter passed to backend server component from INSPIRE SOE.                                      |
| 95320 | SOE_XTRASERVER_COMMUNICATI<br>ON_PARAMETER_EXTERNAL_REFE<br>RENCES      | External references parameter passed to backend server component from INSPIRE SOE.                            |
| 95321 | SOE_XTRASERVER_COMMUNICATI<br>ON_PARAMETER_ONLINE_RESOU<br>RCE_GET      | Online resource GET endpoint parameter passed to backend server component from INSPIRE SOE.                   |
| 95322 | SOE_XTRASERVER_COMMUNICATI<br>ON_PARAMETER_ONLINE_RESOU<br>RCE_POST     | Online resource POST endpoint parameter passed to backend server component from INSPIRE SOE.                  |
| 95323 | SOE_XTRASERVER_COMMUNICATI<br>ON_PARAMETER_CONFIG_PATH                  | INSPIRE configuration store path parameter passed to backend server component from INSPIRE SOE.               |
| 95324 | SOE_XTRASERVER_COMMUNICATI<br>ON_PARAMETER_CONFIG_FILE_P<br>ATH         | INSPIRE configuration file path parameter passed to backend server component from INSPIRE SOE.                |
| 95325 | SOE_XTRASERVER_COMMUNICATI<br>ON_PARAMETER_SCHEMA_URL                   | Schema url parameter passed to backend server component from INSPIRE SOE.                                     |
| 95326 | SOE_XTRASERVER_COMMUNICATI<br>ON_PARAMETER_SCHEMA_PATH                  | Schema path parameter passed to backend server component from INSPIRE SOE.                                    |
| 95327 | SOE_XTRASERVER_COMMUNICATI<br>ON_INIT_FAILED                            | Initialization of backend server component backend failed.  |
| 95328 | SOE_XTRASERVER_COMMUNICATI<br>ON_INIT_FAILED_NOT_REGISTERE<br>D         | backend server component was not registered and cannot be initialized. Please run INSPIRE repair installation |
| 95329 | STORED_QUERY_DOWNLOAD_SU  | Started submitting stored query processing jobs.  |

|                  | binit_inoboenion   |   |
|------------------|--|---|
| 95330            | STORED_QUERY_DOWNLOAD_ST<br>OP_PRODUCTION                  | Stop a stored query processing job.   |

# 13 Appendix: ArcGIS for INSPIRE 10.3.1 to 10.7.1 Special Upgrade Instructions

The purpose of this appendix is to provide special installation instructions for users upgrading the 'ArcGIS for INSPIRE Server Extension' from version 10.3.1 to 10.7.1. The upgrade requires these special instructions because the necessary process to uninstall earlier versions may not properly clean up and unregister the XtraSrvCOM assembly. If you are upgrading from a more recent version (i.e., 10.4 – 10.6.1) these special instructions do not apply.

Please follow <u>one</u> of the following options to clean up the registry entries and install the extension. Options 1 and 2 will work best if followed before executing the 'ArcGIS for INSPIRE 10.7.1 – Server Extension' setup.exe to perform the 'ArcGIS for INSPIRE 10.7.1 – Server Extension' upgrade process. If you have already performed the 'ArcGIS for INSPIRE 10.7.1 – Server Extension' upgrade process, try following the instructions in Step 2a of both Option 1 and/or Option 2. Otherwise you may need to follow Option 3 to manually remove registry entries.

IMPORTANT: If you're running in a <u>multiple GIS server</u> site, repeat the steps from your chosen option below on every server in the site.

# **OPTION 1** – Remove XtraSrvCOM registration: Login as Administrator and use ArcGIS Server service user credentials to unregister old settings

- 1. Login to the ArcGIS Server as a user with Administrative rights.
- 2. Stop the ArcGIS Server service. If 'ArcGIS for INSPIRE 10.3.1 Server Extension' application is still installed on the system, then proceed to Step 3, otherwise:
  - a. If ArcGIS for INSPIRE 10.3.1 has already been uninstalled, you will need to retrieve files from another 10.3.1 installation. If you have access to the 10.3.1 setup files, you can run an Administrative installation to get the files extracted. Once you have access to the files on the server, proceed to the next step.

3. Find the path to the XtraSvrCOM.dll

|                  |        |   |                    |                    | - • ×     |

| 8 items          |        |   |                    |                    |           |

4. Open a command prompt window as Administrator and run the following command using the ArcGIS Server service user name with domain.

C:\windows\system32>runas /user:myDomain\myUsername "regsvr32 \"C:\arcgisserver\configstore\arcgisforinspire\bin\XtraSrvCOM.dll\" /u"

Example: Select Administrator: Command Prompt - - × C:\windows\system32>runas /user:cmtest1\arcgis "regsvr32 \"C:\arcgisserver\config-store\arcgisforinspire\bin ^ \XtraSrvCOM.dll\" /u"

5. You will be prompted for the password for the ArcGIS Server service user. Enter the password and press Enter.

6. You should see the following dialog. Click ok.

| RegSvr32 |   |  |
|----------|---|--|
| 1        | DIIUnregisterServer in<br>C:\arcgisserver\config-store\arcgisf\XtraSrvCOM.dll<br>succeeded. |  |
|          | ОК  |  |

- a. If you encounter errors unregistering the XtraSrvCOM.dll please see "Option 3 Manually remove registry entries" below.
- 7. Navigate to the *ServerExt* folder and run setup.exe and follow instructions on the installation wizard interface.
  - a. During this process you will see the following dialog window. Please ignore by clicking the 'Continue' button.

| Site Machines  | ×    |
|--|------|
| Before continuing, please unregister the XtraSrvCOM<br>assembly by running the following batch file on each<br>site machine in the SITE MACHINES list below. |      |
| Batch File:  |      |
| C:\arcgisserver\config-store\arcgisforinspire\bin\UnRegister   | Dlls |
| SITE MACHINES:   |      |
|  |      |
| Click Continue when you have finished running the batch fi<br>on each machine.   | le   |
| Click Cancel to exit the uninstallation.   |      |
| Continue Cancel  |      |

8. You need to authorise software to use the 'ArcGIS for INSPIRE Server Extension'. Run the ArcGIS Software Authorization Wizard to authorise the installed server extension.

The installation is now completed. Proceed to section **5 Configuration** to configure ArcGIS for INSPIRE.

# **OPTION 2** – Remove XtraSrvCOM registration: Login to the ArcGIS Server system as the ArcGIS Server service user

- 1. Login to the ArcGIS Server as the user for the ArcGIS Server service
- 2. Stop the ArcGIS Server service. If 'ArcGIS for INSPIRE 10.3.1 Server Extension' application is still installed on the system, then proceed to Step 3, otherwise:
  - a. If ArcGIS for INSPIRE 10.3.1 has already been uninstalled, you will need to retrieve files from another 10.3.1 installation. If you have access to the 10.3.1 setup files, you can run an Administrative installation to get the files extracted. Once you have access to the files on the server, proceed to the next step.
- 3. If ArcGIS for 10.3.1 is not installed, extract the attached XtraSrvCOM zip package to a location on the server and proceed using that location.

4. Find the path to the XtraSvrCOM.dll

 Open a command prompt window and run the following command regsvr32.exe /u <Path to XtraSrvCOM.dll folder>\XtraSrvCOM.dll Example:

6. You should see the following dialog. Click ok.

- a. If you encounter errors unregistering the XtraSrvCOM.dll please see "Option 3 Manually remove registry entries" below.
- 7. Navigate to the *ServerExt* folder and run setup.exe and follow instructions on the installation wizard interface.
  - a. During this process you will see the following dialog window. Please ignore by clicking the 'Continue' button.

| Site Machines ×  |
|--|
| Before continuing, please unregister the XtraSrvCOM<br>assembly by running the following batch file on each<br>site machine in the SITE MACHINES list below. |
| Batch File:  |
| C:\arcgisserver\config-store\arcgisforinspire\bin\Un RegisterDlls  |
| SITE MACHINES:   |
|  |
| Click Continue when you have finished running the batch file<br>on each machine.   |
| Click Cancel to exit the uninstallation.   |
| Continue Cancel  |

8. You need to authorise software to use the 'ArcGIS for INSPIRE Server Extension'. Run the ArcGIS Software Authorization Wizard to authorise the installed server extension.

The installation is now completed. Proceed to section **5 Configuration** to configure ArcGIS for INSPIRE.

#### **OPTION 3 – Remove XtraSrvCOM registration: Manually remove registry entries**

#### Make a backup of the registry.

It's recommended to not to have any version of ArcGIS for INSPIRE installed at this point. If a newer version is installed, please stop the ArcGIS Server service as described in Step 2 in the previous options.

Remove the following registry entries:

Note: The values highlighted in cyan will be different depending on the user id in the registry. The values highlighted in yellow are the registry keys that need to be removed.

[HKEY\_LOCAL MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\Installe r\UserData\<mark>S-1-5-18</mark>\Components\FE3A6FD606AF63BDA322EB410D758623] (Note: This entry exists if the INSPIRE application is still currently installed)

[HKEY\_LOCAL\_MACHINE\SOFTWARE\Wow6432Node\Microsoft\Windows\CurrentVers ion\SharedDLLs]

"C:\\arcgisserver\\config-

store\\arcgisforinspire\\bin\\XtraSrvCOM.dll"=dword:0000001 (Note: This
entry exists if the INSPIRE application is still currently installed)
